

Get to Know Blockchain

Wednesday February 28th 2018

6.00 pm – 9.00 pm

VBC in Oasis500 (Business Park – Mecca Street)

CPE: 2.5 Hrs

Fees: 10 JOD for Members & 20 JOD for Non Members

Blockchain is a transformational technology with the potential to extend digital transformation beyond a company's walls and into the processes it shares with suppliers, customers, and partners.

At its core, a blockchain is a data structure that's used to create a digital transaction ledger that, instead of resting with a single provider, is shared among a distributed network of computers.

The result is a more open, transparent, and verifiable system that will fundamentally change the way we think about exchanging value and assets, enforcing contracts, and sharing data.

A growing number of enterprises are investing in blockchain as a secure and transparent way to digitally track the ownership of assets across trust boundaries, reimagine shared business processes, and create new models for cross-organizational collaboration.
